

DEAR MOBILE SERVICE PROVIDER:

The City of Coronado believes that reducing pollution is critical to maintaining the community's quality of life. We have developed the Clean Coastlines Program to ensure that precious resources such as clean water and air are never compromised.

We are partnering with the mobile services community to help promote Best Management Practices (BMPs) or methods used at mobile services locations to keep pollution out of our storm drains and to protect our ocean and bay.

By providing you with the tools to create an efficient and environmentally safe mobile services location, we hope to make your job easier while keeping our coastlines clean.

Included in this brochure is valuable information on important BMPs, spill response kits and Coronado's inspection and enforcement program. We hope you find it useful.

Together, we have the ability to preserve and improve the quality of life in Coronado.

Sincerely,

Scott W. Huth

Director of Public Services

All mobile businesses should be equipped with a spill response kit to handle all unintentional spills. Spill response kits should include instructions to follow in case of a spill, cloths, perimeter controls (sand/gravel bags, rolled-up towels, etc.), plugs, a container of sealant, a bag of absorbent material and a pair of rubber gloves. Ready-made spill kits are available on the market. For more information, call 619.522.7380.

INSPECTION AND ENFORCEMENT PROGRAM

The City of Coronado Inspection and Enforcement Program was established to ensure that all businesses operate in compliance with all appropriate storm water laws and other City requirements. Mobile service staff, site supervisors and property owners can be held responsible for violations, which may lead to a civil penalty of up to \$10,000 per day and reimbursement of expenses associated with clean-up.

Mobile service materials and residuals such as cleaners, grease, soapy water, dirt, debris, runoff or trash often find their way into our streets, alleys, and storm drains, polluting the environment and jeopardizing Coronado's beaches, surrounding recreational waters and quality of life.

The City of Coronado is working with mobile service providers to implement what are known as Best Management Practices (BMPs) at all sites. BMPs are methods used to keep pollution out of our storm drains and off City property, such as sidewalks, streets, parkways and alleys. Carrying out and maintaining these BMPs at your customer's sites is critical to protecting our ocean and bay.

The following is a partial list of BMPs and pollution prevention measures that must be implemented at all mobile service locations.

1. *Reduce, Reuse and Recycle.*
2. *Conduct ongoing site cleanings.*
3. *Prevent debris, trash and spills from reaching the City street or alley.*
4. *Educate employees about BMPs.*
5. *Regularly maintain all BMPs at service sites.*

BEST MANAGEMENT PRACTICES

SITE OVERVIEW

Protecting clean air and clean water improves our quality of life and preserves the local environment for future generations. Unintentional spills at mobile service locations can flow into storm drains and pollute the ocean and bay. These spills are prohibited by law. The following drawing illustrates the Best Management Practices (BMPs) that must be used at all mobile service locations in the City to protect storm drains and minimize pollution.

MECHANIC

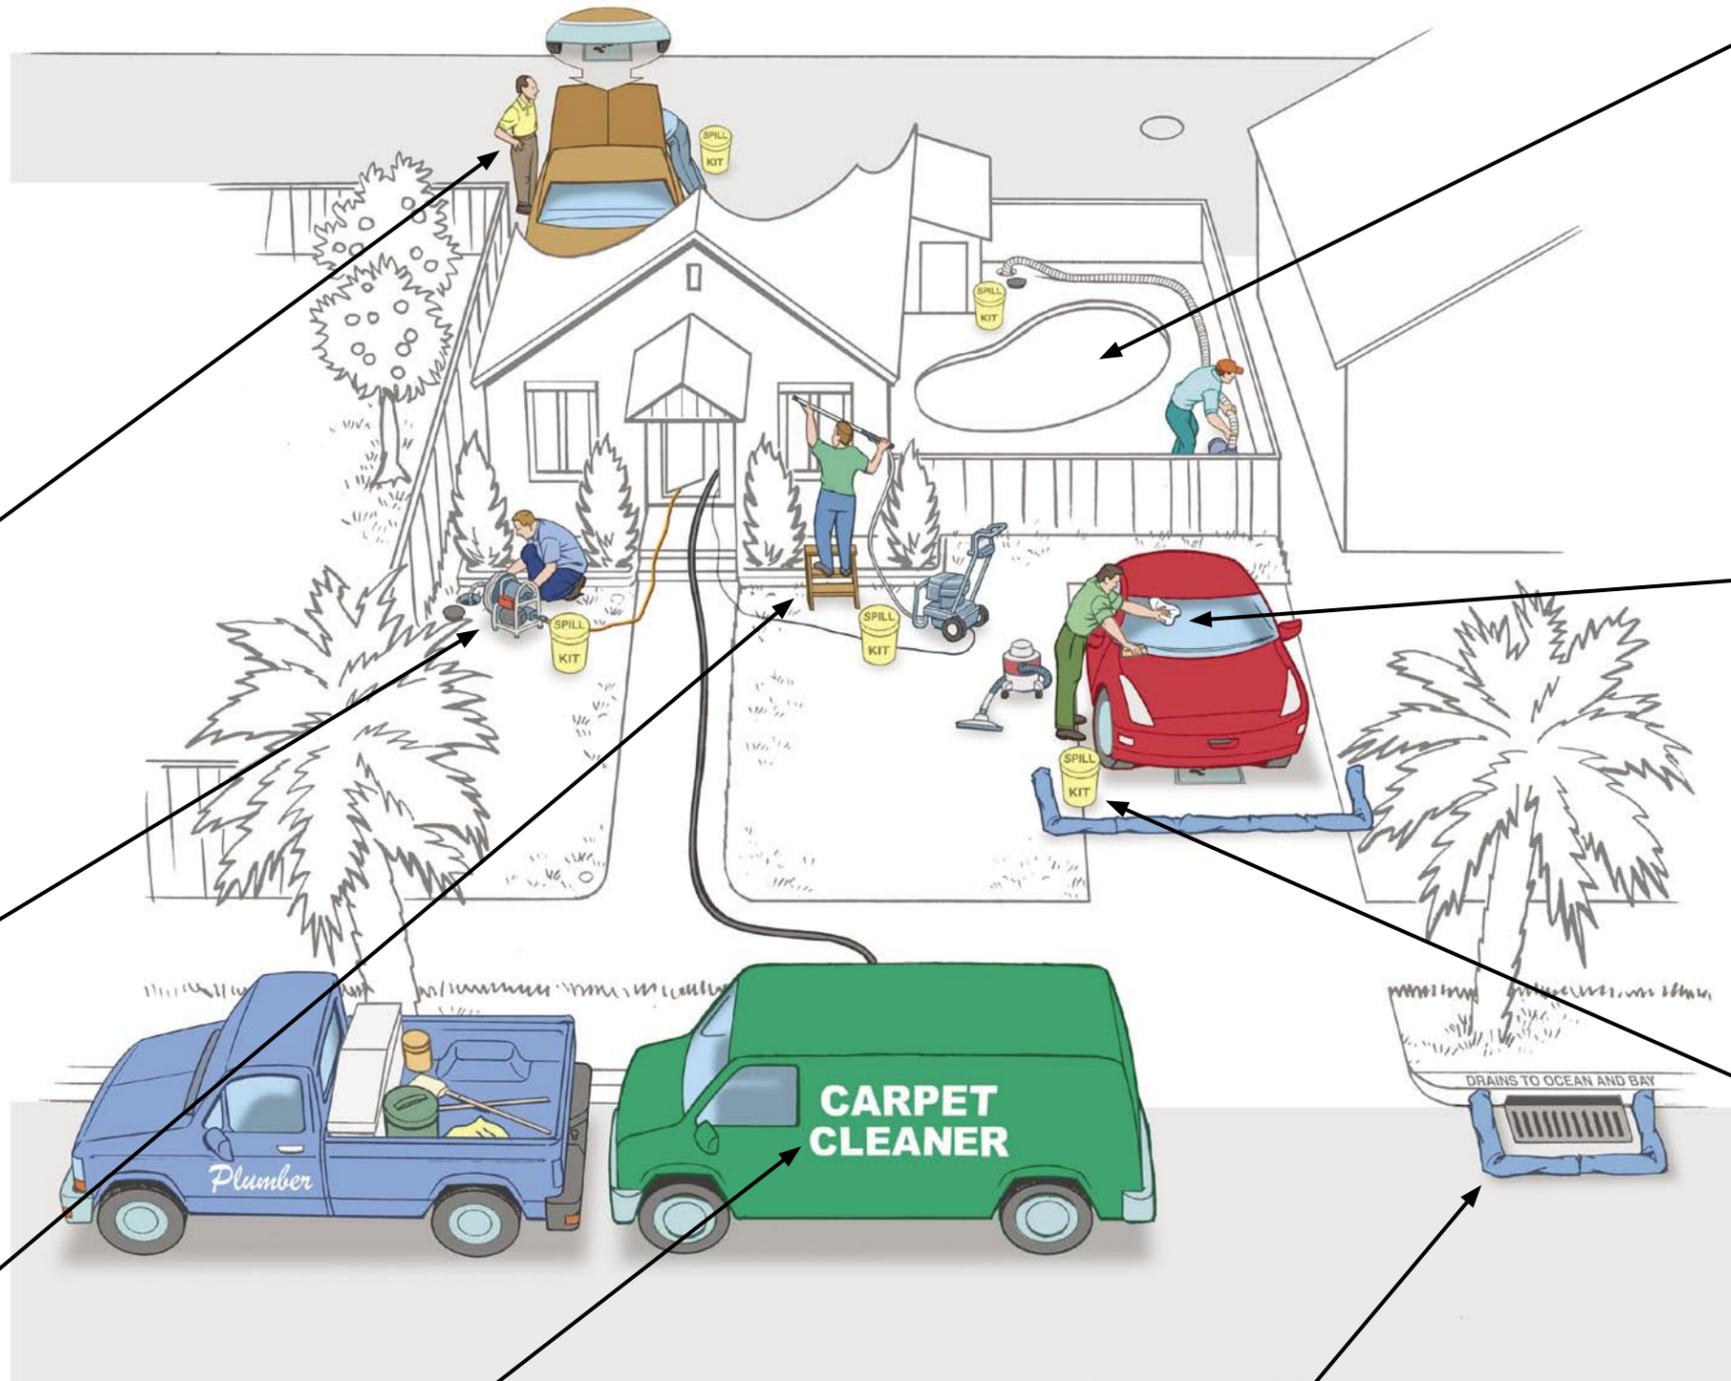

All work must be performed on private property. Only emergency repairs are allowed in the City's streets and alleys. All hazardous waste and fluids must be prevented from leaking onto City streets or alleys. Use a drip pan to avoid spills. All chemicals shall be stored in an enclosed area when not in use. Keep a spill response kit on site.

PLUMBING

Routinely check all pipes for leaks. All work must be performed on private property. All hazardous waste and fluids must be kept from entering City streets and alleys. Use berms to prevent runoff from entering the City's rights-of-way. Store chemicals in leak-proof containers and keep covered when not in use. Keep a spill response kit on site.

WINDOW/ POWER WASHING

All runoff water must be properly contained on private property. No runoff water is permitted on City streets or alleys. Keep all equipment on private property. Wash water must be disposed of in a sanitary sewer, landscaping or soil. A wet/dry vacuum is the preferred method to collect runoff for proper disposal into the customer's sewer cleanout.

CARPET CLEANING

Never discharge cleaning water onto City streets or alleys. Cleaning water can only be discharged into a drain connected to a sanitary sewer system. Filter wash water before discharging to the sanitary sewer to avoid clogging pipes. Dispose of filtered materials properly. Store chemicals in leak-proof containers and keep covered when not in use.

STORM DRAINS

Storm drains are to be used solely as flood control. They must be protected at all times with perimeter controls, such as sand bags, gravel bags, or straw wattles. Vacuums should be used to control runoff.

POOL, SPA AND POND SERVICE

Do not allow any runoff into City streets or alleys. Drain pool water or backwash through a sewer cleanout line, not a manhole or storm drain. Pools and fountains must be dechlorinated to less than 1.0 ppm free chlorine before they are discharged to the sewer. Store chemicals in leak-proof containers and keep covered when not in use. Dispose of hazardous waste properly. Do not put hazardous waste in a trash can or storm drain. Pool, spa, pond or fountain water is not allowed to be pumped to City streets, alleys or storm drains.

CAR WASHING/ MOBILE DETAILING

Wash cars on private property. Car washing in City streets or alleys is prohibited. Use a hose nozzle with a trigger to save water and prevent runoff. Capture and dispose of wash water and chemicals properly. It is illegal to allow wash water to run onto City streets, alleys or storm drains. Use berms to prevent runoff water from entering storm drains. Keep a wet/dry vacuum on site to collect runoff water. Store chemicals in leak-proof containers and keep covered when not in use. Keep a spill response kit on site.

SPILL RESPONSE KIT

Keep a spill response kit to clean up unintentional spills. This kit should include instructions to follow in case of a spill, cloths, plugs, a container of sealant, a bag of absorbent material and a pair of rubber gloves.
