Downtown Coronado Sidewalk Repairs To Begin Monday

Coronado, CA (September 27, 2011) – The City of Coronado will begin repairing portions of sidewalk in the downtown area from the 900 to the 1100 block of Orange Avenue as part of the City's Downtown Sidewalk Repair project.

Crews will repair those areas of sidewalk that have been damaged by invasive roots from nearby trees, and install root barriers to prevent future damage.

Construction is currently scheduled to begin Monday, October 3, 2011. The work is expected to be completed in early December.

The City of Coronado works diligently to maintain its sidewalks and other public property. City staff and the contractor will work to minimize any inconvenience the project may have for local businesses and residents.

Although the project will be phased to limit the impacts to residents and businesses within the work area, parking along Orange Avenue will be affected during construction. The contractor will provide the occupants of each adjacent property where work is set to begin with at least three days' notice of any construction or parking restrictions.

Additionally, the contractor, Tri-Group Construction and Development, has been directed to maintain a four-foot wide minimum portion of sidewalk for pedestrian travel as well as access to all businesses throughout the construction effort.

Any questions about the project or concerns about the work can be directed to the City's Engineering & Project Development Department at (619) 522-7383.
